Select Parts using CAPS™

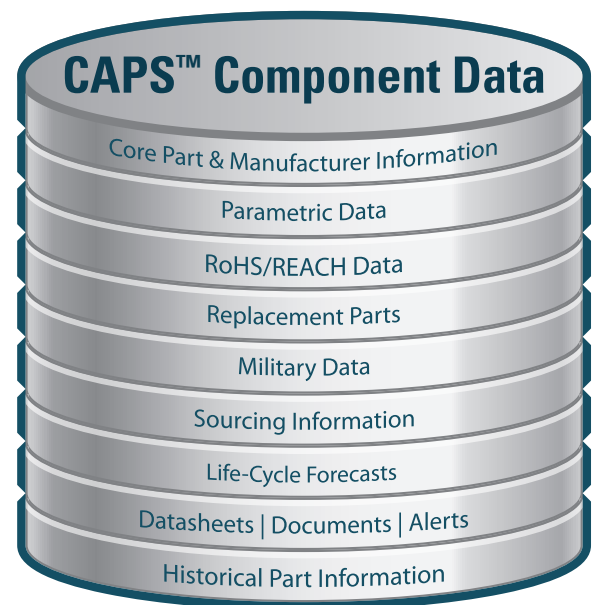

The industry's leading source of component data

Engineers need data to support their design efforts, build and validate bills of materials (BOMs) and manage product lifecycles. PartMiner's CAPS database is the leading source of technical information in the industry, delivering complete data sets on more than 168 million individual electronic components from more than 1800 active manufacturers. It is a highly respected resource for researching, selecting, and analyzing electronic components.

CAPS data comes directly from manufacturer feeds and comprehensive datasheets. A team of experienced content engineers manages CAPS to maintain the quality, currency, and consistency of the data.

Engineers use CAPS for multiple purposes:

- Lifecycle forecasts
- Bills of Materials (BOMs)
- Parametric searches
- Side-by-side comparisons
- Cross references
- Environmental compliance (REACH, RoHS)

Commitment to Quality Parts and Processes

PartMiner's commitment to quality is evident on many levels.

We take these steps to safeguard quality:

- We adhere to ISO guidelines throughout the sales and purchasing processes.
- Our warehouse operations have strict record-keeping, receiving, and verification processes.
- We have our own testing facility in Shenzhen, China. Few other firms offer this.
- We only source from reliable and approved vendors around the world.
- We've opened our own Quality Inspection Facility in Shenzhen, China.

Rely on Our Knowledge and Experience

Sourcing electronic components around the world is challenging. You need to know where to find them, who made them, what they're made of, alternatives, lifecycle risk and other factors. PartMiner WorldWide does. In fact, there isn't much we don't know about electronic components.

Your Source when Traditional Supply Chains Break Down

For companies whose traditional sources of supply no longer function effectively, PartMiner offers a highly viable alternative. Our detailed knowledge connects you to sources of supply that can keep production running, even when traditional supply chains let you down.

An Objective Source

PartMiner is an unbiased source for parts. We don't hold inventory. We have no franchise agreements. We can buy and sell from anyone, anywhere. That means we'll find the right parts for you based solely on your criteria. Period.

The World is Our Marketplace

PartMiner has built a powerful global sourcing network to expand your supply chain. We're connected to thousands of sources around the world including component manufacturers, franchised distributors, independent distributors and excess inventory. We connect with sources daily, gaining market intelligence that helps us understand trends, potential supply shortages, and price fluctuations. When you need parts, we know where to find them.

Electronic Component Intelligence

About Us

For 17 years, PartMiner has served companies whose supply chains have failed. For these companies, a relationship with PartMiner is critical to keeping production running. They know they can depend on PartMiner for the parts they need and make the right parts choices by using our CAPS data. To select and buy parts, look to the people who know them best: PartMiner WorldWide

PartMiner WorldWide Inc. provides electronic component procurement services to thousands of electronics manufacturing companies around the world. PartMiner collects and interprets worldwide market intelligence and component data from manufacturers, distributors, and other supply sources. PartMiner's CAPS™ database is the leading source of technical information in the industry delivering complete data sets on more than 168 million individual electronic components from more than 1,800 active manufacturers.

PartMiner is headquartered in Centennial, Colorado, USA. PartMiner and CAPS are trademarks or registered trademarks of PartMiner WorldWide Inc.
